EDUCATION

Indiana University Bloomington

August 2025 - May 2027

Master of Science, Computer Science

Bloomington, Indiana

WORK EXPERIENCE

ORIX - Azure AI, Document Intelligence, AI Search, Logic Apps, Function Apps, Databricks, Python, RAG, LLMs

AI Developer Intern

May 2026 - Present

- Architected an event-driven **Azure document-ingestion pipeline** processing **300-400 daily documents** into an **85,000+ document** knowledge base using **AI Document Intelligence**, **MarkItDown**, semantic chunking, and **Azure AI Search**.
- Engineered a **Retrieval-Augmented Generation (RAG) agent** over the knowledge base with **hybrid vector + keyword search**, **reranking**, and prompt orchestration, reducing manual document-discovery workflows by **70%**.
- Built a **natural-language analytics workflow on Azure Databricks** over millions of loan-portfolio rows, turning plain-English questions into **generated SQL**, reducing query creation time from **10 minutes to 15-20 seconds**.

Nomura Holdings - React.js, Node.js, Python, Java (Spring Boot), Neo4j, Pact Broker, Docker, Kubernetes

Software Analyst

July 2024 - July 2025

- Migrated a **40+ page enterprise portal from Angular to React**, redesigning the UI, implementing caching to reduce load time by **84%**, and introducing AppTour to improve onboarding and navigation for **200+ users**.
- Developed **Java Spring Boot microservices** and **RESTful APIs** for Nomura's NCD Pipeline, including an **application auto-onboarding service** that reduced setup time from **2-3 weeks to 5 minutes**, saving **100+ engineering hours per team**, while integrating with enterprise NCD2.0 CI/CD workflows.
- Built an **AI assistant** with **Neo4j graph visualizations** for **100+ applications**, revamped the Admin Portal with usage analytics and monitoring, and optimized large-scale data processing to reduce **API latency by 20%** through Python-Neo4j graph analysis.

Software Developer Intern

January 2024 - June 2024

- Authored **unit tests and integration tests** for Java APIs and implemented **Pact Broker** for contract testing, boosting test coverage from 48% to 83%.
- **Redesigned the portal UI** with 20+ reusable components, improving accessibility and reducing insight extraction time by 30% for 1,000+ users.

Tata Research Development and Design Centre - Blender, ReactJS, AR/VR, 3D Modeling

AR/VR Developer

May 2023 - July 2023

- Modeled a high-fidelity **3D representation of the human nasal cavity** using Blender and medical imaging references, creating anatomically accurate visuals for surgical planning and medical education.
- Transformed the 3D anatomical model into an immersive Augmented Reality/Virtual Reality (AR/VR) experience and embedded the solution within a ReactJS-based web platform, enabling interactive exploration that enhanced surgical preparedness.

PROJECTS

Relay - Cost-Optimizing LLM Gateway 🚀 | Python, FastAPI, Redis Stack, PostgreSQL, Prometheus, Grafana, Docker July 2026

- Made an **OpenAI-compatible LLM gateway: semantic caching** via local embeddings (**95% hit rate**, **2.5% false-hit** on an 80-pair held-out adversarial corpus) and **complexity-based model routing**, cutting simulated API spend **91%** over **67k-request** load tests.
- Engineered **Lua token-bucket rate limiting**, per-team budgets, and **circuit-breaker failover - zero dropped requests** in provider-outage drills at **3.6 ms p50 overhead**, monitored via **Prometheus/Grafana**.

Argus - LLM Evaluation & Observability Platform 🚀 | Python, FastAPI, PostgreSQL, Streamlit, GitHub Actions May 2026

- Created a self-improving **LLM evaluation platform** tracing multi-step pipelines end to end, **auto-mined production traces into eval datasets** via HDBSCAN + LLM labeling, adding **143 cases** at **92%** verified precision.
- Authored an **80-case adversarial benchmark** with a versioned labeling guide and **six-flag safety auto-fail judge**, CI gate with paired **McNemar tests** caught **100%** of injected prompt regressions pre-merge.
- Shipped **prompt versioning with rollback**, consistent-hash **A/B experiments**, and a **backward-trace root-cause analyzer** with **81%** step-identification accuracy over **48** injected failures.

Cue - Intent-Aware AI Workspace Agent 🚀 | Gemini, React, MongoDB Atlas, Model Context Protocol

February 2026

- Built a predictive **Chrome extension using Gemini and MongoDB Atlas** that analyzes browsing history to forecast the user's **next five tasks** with **90%+ accuracy**, integrated with a **real-time React dashboard** for workspace management.
- Leveraged the **Model Context Protocol (MCP)** to automate workflows across **9+ Google Workspace tools**, reducing manual task execution by **70%**, and developed a **Multimodal Scribe** for meeting summaries and highlight reels.

SKILLS

- **Languages and Frameworks:** Java (Spring Boot), Python, JavaScript (React.js, Node.js), FastAPI, RESTful APIs, TypeScript, Dart, Flutter, Angular, SQL, Scala, PHP, HTML/CSS, Flask, Figma, UI/UX Design
- **Cloud and Technologies:** AWS Bedrock, SageMaker, Lambda, EC2, S3, CloudFormation, Google Cloud Platform, Microsoft Azure, Azure Databricks, PostgreSQL, pgvector, Redis Stack, RedisVL, SQLAlchemy, Alembic, Streamlit, OpenTelemetry, HDBSCAN, scikit-learn, TensorFlow, Firebase, Docker, Kubernetes, Ansible, Neo4j, Prometheus, Grafana, Dialogflow, CrewAI
- **Tools and Platforms:** Git, CI/CD (Jenkins, GitLab, GitHub Actions), Docker Compose, MongoDB, MySQL, Machine Learning, LLM Evaluation, Prompt Engineering, A/B Testing, Vector Search, Observability, Distributed Systems, Statistical Testing (McNemar), Agile/Scrum, Cloud Computing, AR/VR, Blender, Model Context Protocol (MCP), Pact Broker
